The annual Rainforest World Music Festival in Sarawak, Malaysia is a much celebrated tourism
event and has global awareness as a festival of world music. Notwithstanding the popularity of the
festival, there has been no study of visitor intentions. Drawing upon the theory of planned behavior,
this study aims to determine the effect of attitude, subjective norm, perceived behavioral control,
and past experience on behavioral intentions to attend the festival from the local visitor perspective.
A questionnaire-based survey was administered using purposive sampling and ultimately 241 respondents participated. Multiple regressions analysis and t test were used to perform tests of relationship and difference. The findings show that although all the factors that are of interest have positive effects on intentions to visit the Festival, local visitors who have and have not attended previously exhibit very different behaviors. The study provides insights for the benefit of festival organizers and relevant stakeholders within the wider context of music festivals.

Key words: Rainforest World Music Festival (RWMF); Intention; Tourism; Theory of planned behavior (TPB); Sarawak

Introduction

Tourism is becoming a vital industry for many countries and destinations due to its economic capacity in making the market vibrant and increasing foreign exchange revenue [Agarj & Murati, 2009; Chaietchi, Pryce, & Bhati, 2015; Klijs, Heijman, Korteweg, Maris, & Bryon, 2012; Marsiglio, 2015; Neves, Fernandes, & Pereira, 2015; United Nations Environment Programme (UNEP), 2013]. It is reported by United Nations World Travel Organization (UNWTO) that by 2020 the number of international travelers would surge to 1.6 billion, with revenue from tourism grossing more than US$2 trillion (Aramberri, 2009; Avdimiotis, Bonarou, Dermontzopoulos, Karamanidis, & Mavrodontis, 2009).
