PREFACE

It is my honour and esteem to introduce the book entitled Employee Appraisals and Cognitive Information Processing System. This topic is vitally important for officer or manager in every sector and on whatever scale. Organizations will face an inevitable process in appraisal system which will create errors and other issues.

Therefore, there is a need to understand especially about information and decision making process in appraisal system. This information can then be used to help the managerial group in decision making-process.

The objective of this book is to discuss the theory, practice and research related to performance appraisal decision making. The results of this initial study will be presented to interested parties to gain more in-depth understanding of the subject.

I wish to express my appreciation to the author for this positive effort.

PREFACE

It is my honour and esteemed pleasure to give my note in this book entitled Employee Appraisals and Cognitive Information Processing System. This topic is vitally important in management, as a main task for officer or manager in every organization, whether private or public, and on whatever scale. Without any doubt, officer or managers in organizations will face and perform this crucial task. If the decision process in appraisal systems is undertaken in an improper manner, this will create errors and can affect other matters in organisations.

Therefore, there is a need to further explore the decision process, especially about information processing, in order to gain better understanding and input on how decision-making was made in organisations in general, and especially performance appraisal decisions. This information can then be used to enhance the effectiveness of the decision making-process and to help to create a good relationship between managerial group and employees in organisation.

The objective of this book is to assemble input from various sources: theory, practice and research outcomes for better understanding of the performance appraisal decision-making process. It is my hope that some of the results of this initiative will engender a good move by all interested parties to gain more exposure, knowledge and experience about the subject.

I wish to express my congratulations and appreciation to the author for this positive effort in writing this book.

Professor Datuk Dr. Abdul Rashid Abdullah

ACKNOWLEDGEMENTS

Praise is to Allah The Beneficent, The Merciful, for giving me the strength and courage to complete this book. Firstly I would like to point out that this book is an outcome of half of my Doctor of Philosophy study in the University of Bradford Management School, United Kingdom. I would like to express my sincere thanks to all my supervisors and my tutor (Dr. David P. Spicer, Mr. David Taylor, Professor Dr. Edward Snape, Dr. Van Hutzhing and Professor Arthur P. Francis).

I would like to express my deepest gratitude and my hearty thanks to my wife, my children and my parents for their constant love and support understanding, tolerance and sacrifice. Without their constant love and support, this book would not have been possible.

I would also like to thank my academic college in the Human Resource Department, Faculty of Cognitive Sciences and Human Development, Universiti Malaysia Sarawak for direct or indirect help during these challenging tasks.

Last but not least, my deepest gratitude to Universiti Malaysia Sarawak for sponsoring my Ph.D study and its encouragement to make these ideas become reality.

I also would like to highlight that nothing is impossible in this world and it can be done with work hard and smart and performing doa and tawakkal to God (Allah).

FOREWORD

In every organisation, human resource management is determining its survival. No organisation can survive without its ultimate assets compared with factory, hardware, software, key or prerequisite factors that must be there for a factory runs as planned. A well-designed human resource management system means that it can be the key role in company success. Commonly, but not necessary, organisation, this situation is in the form of complaints of low productivity, early retirements, high turnover are reasons why the appraisal activities give direct or indirect help during these challenging tasks.

Today, nobody can deny appraisal activities as one of the management functions. The appraisal activities can play a key role in company success. Using the information processing systems for human resource management, exploring the information processing models, the decision-making process, the processing models.

FOREWORD

In every organisation, human beings or workers play a vital role in determining its survival. Human capital, or workers, have become the ultimate assets compared with other resources (money, land, machine, factory, hardware, software, material, equipment and etc), and are the key or prerequisite factors in making the operation of the organisation or factory runs as planned. Linking the appraisal system to the reward system means that it can be used as a strategic tool by organisations. This can play a key role in communicating values, promoting flexibility and maximising individual contributions to organisational objectives. Commonly, but not necessarily, if the workers are not happy with the organisation, this situation leads to job dissatisfaction among employees in the form of complains of unfairness, job absenteeism, low motivation, low productivity, early retirement, and other related issues. Thus, there are reasons why the appraisal process and decisions have become very popular issues of management concern and academic study. Appraised activities give direct or indirect impact to workers performance in the workplace. Today, nobody can deny the important of performance appraisal activities as one of the important activity in human resource management functions. This book is interested in understanding the information processing system in the performance appraisal decision. In exploring the information processing system, which occurs in the decision-making process, this book will utilize the practice of cognitive processing models.

## CONTENTS

**PREFACE**  
**ACKNOWLEDGEMENTS**  
**FOREWORD**  
**CONTENTS**  

### CHAPTER 1 - EMPLOYEE APPRAISALS

- Overview  
- Employee Performance  
- Issues and Challenges  

### CHAPTER 2 - PERFORMANCE APPRAISAL CONCEPT

- Overview  
- Defining Performance Appraisal  
- Purposes of Performance Appraisal  
- Approaches to Performance Appraisal  

### CHAPTER 3 - THEORIES UNDERPINNING EMPLOYEE PERFORMANCE APPRAISAL

- Overview  
- Instinct Theory  
- Drive Theory  
- Maslow's Hierarchy of Needs  
- Herzberg's Two-Factor Theory of Motivation  
- Equity Theory  
- Expectancy Theory  
- Vroom's Valence-Expectancy Instrumentality Theory  
- Porter and Lawler's Model  
- Goal-Setting Theory  
- Reinforcement Theory  
- Relation Between Related Theories and Employees Performance Appraisals  

### CHAPTER 4 - PERFORMANCE APPRAISAL REVIEW

- Overview  
- Rating Methods  
- Rater Training  

### CHAPTER 5 - COGNITIVE APPRAISAL

- Defining Cognitive Processes  
- Cognitive Processing Theories  
- Cognition Theory  
- Implicit Theory  
- Causal Attribution Theory  

### CHAPTER 6 - COGNITIVE DEVELOPMENT

### CHAPTER 7 - COGNITIVE PROCESSING MODEL IN THE MALAYSEAN PUBLIC SERVICE

### CHAPTER 8 - REMUNERATION AND PUBLIC SECTOR OF THE MALAYSEAN PUBLIC SERVICE

- Evaluation Process in the Malay:  
- Attitudes to Cognitive Information  
- Malaysian Public Service  
- Raters' and Ratees' Attitudes Toward Cognitive Processing Model Status  

- Conclusion
