Abstract

The purpose of developing the module for MOOC and brain Awareness is to spread the knowledge of neuroscience to the learning community in Sarawak. The large populations of learning community (urban and rural) will be able to access the MOOC. The instructional material (Video) will be uploaded to MOOC to assist their understanding and create awareness among the secondary school children throughout Sarawak. Instructional module is a self-contained unit focusing on a specific learning goal. For the beginning, this project will focus on the brain basics to help secondary school students understanding on brain anatomy and its function.
