# TABLE OF CONTENTS

## ***Biodiversity & Environmental Conservation (BEC)***

Page

1	Expression Patterns of the Human Ribosomal Protein Genes <i>eL14</i> and <i>uS19</i> in Colon Cancer is Dependent on the Type and Stage of the Cancer Cell	2
2	Perceived Susceptibility and Severity of Diarrhoea, Nasopharyngeal Cancer and Human Immunodeficiency Virus Infection	4
3	Evaluation of Ubi Gajah for Fuel Bioethanol via Hydrolysis and Fermentation	6
4	Effect of Nanoclay on the Thermal Properties of Silane Treated Jute/Polyethylene Nanocomposites	8
5	Characteristics of Artificial Lightweight Aggregates Produced from Palm Oil Fuel Ash and Fly Ash Using Cold-Bonding	10
6	A Resultant Force Analysis of Current Design for Thresher Operation in Palm Oil Mill Industry	12
7	Effect of Surfactant to the Electrical Properties of the Hole Transporting Layer of Organic Solar Cells	14
8	Conceptual Design and Analysis of Sago Drying Machine	16
9	Effect of Fibre (Polypropylene) Volume in Mortar Mixed with POFA	18
10	Fabrication and Mechanical Properties of Cellulose Nanofiber Reinforced Polyvinyl Alcohol Composites	20
11	Microhabitat Utilization of the Bornean Horned Frog, <i>Megophrys nasuta</i> in Sarawak	22

## ***Information, Communication & Creative Technology (ICCT)***

Page

1	Development of Dynamic Line Rating Model for Phasor Measurement Unit based Wide Area Measurement System in Smart Grid Application	26
2	Intelligent Systems and Synchrophasors Protocols in Smart Grid Applications	28
3	Design and Implementation of Three Phase Inverter for Harmonic Improvement Using Sinusoidal Pulse Width Modulation (SPWM) Control Technique	30
4	Effect of Renewable Distributed Generation on the Voltage Sag of Distribution Networks	32
5	Digitizing Hydrological Patterns for River Traffic Safety	34
6	Flood Prediction Using Seasonal Autoregressive Integrated Moving Average (Sarima) Model	36
7	A Deep Learning Approach to Malware Detection in Android	38

	Platform	
8	Ancient Kawi Character Recognition Using Deep Learning	40
9	Extracting Novel Features for Skin Burn Image Classification	42
10	Perceived Visual Enjoyment Factor in Artistic Playability: In Case Study Real Time Strategy (RTS) Game	44
11	A Meta-Analysis of Attention Enhancement in Learning Based 3D Hologram for Primary School Learner	46
12	Radiofrequency (RF) Radiation Safety Assessment Around Telecommunication Structure in Sarawak	48
13	Geometric Feature Extraction for Identification and Classification of Overlapping Cells for Leukaemia	50
14	An AR Natural Marker Similarities Measurement Algorithms for E- Biodiversity	52

***Sustainable Community Transformation (SCT)***

Page

1	Exploring the Strategic Role of Brand Equity Towards Competitive Advantage	56
2	Rasch Analysis and Differential Item Functioning of Work-Related Flow Inventory (Wolf): A Study on the Hotel Industry in Sarawak	58
3	Mediating Role of Flow in the Relationship Between Job Characteristic and Job Burnout on Work-Family Conflict: A Study on the Hotel Industry in Sarawak	60
4	Local Communities' Perceptions on Rural Tourism Competitive Advantage: A Study on Kampung Bako (Bako National Park), Kuching, Sarawak	62
5	Tourist Expectation on UNESCO World Heritage Sites Brand Signals in Malaysian Historical Cities	64
6	Community Engagement to Gender Differentiated Impacts of Climate Change in a Digital Economy	66
7	Organizational Factors and Work-Life Balance among Policewomen in Sarawak: Emotion Based Coping Strategy as Mediator	68
8	The Relationship Between Personality and Turnover Intention among Academicians of Private Higher Education Institutions: Boredomat Workplace as Mediator	70
9	Documenting Tacit Knowledge for Service Learning Projects	72
10	Contextualizing Learning for Rural Community Using Library-In-A- Box: Experience from Long Lamai	74
11	The Development of Malaysian University Choirs: Choir Members' Experiences, Challenges and Initiatives	76
12	The Effectiveness of LMX in Employee Outcomes in the Perspective of Organisational Change	78

13	Corruption and Stock Market: Evidence from Asian Countries	80
14	Cultural Influence and Capital Structure: An investigation of Inter-country among ASEAN 5	82
15	Consumers' Attitude Towards: Satisfaction and Feedback for Bedside Teaching (BST)	84
16	Medical Students' Perception of Learning Environment in New Campus Of Unimas: Measured By <i>DREEM</i>	86
17	Rethinking and Moving Beyond GDP: A New Measure of Sarawak Economic Panorama	88
18	Financial Development, Efficiency and Competition of ASEAN Banking Market	90
19	Pro-Poor Tourism and Poverty Alleviation in Sarawak	92
20	Managing Work-Life-Family Demands toward Job Satisfaction among Family Business Entrepreneurs	94

This paper is intended to assess the feature extraction technique for identification and classification of white blood cell due to overlapping condition in leukaemia disease. According to the data from SEER Cancer Statistics [1], leukaemia is one of the top ten most common types of blood cancer. In the year 2017, there are 62130 people are expected to be diagnosed and 24500 people are expected to die. In another word, approximately there are 1 person is diagnosed with a blood cancer in every 3 minutes. These data have shown how high the risk of leukaemia to be diagnosed. Therefore, an accurate image processing approach is proposed for diagnosis leukaemia.

After reviewed existing studies, there are a lot of related methods was proposed. However, most of existing methods or algorithms had encountered the accuracy problem in cell counting when overlapping cell occurs. Furthermore, the higher the degree of overlapping cells, the lower the accuracy of cell counting. Hence, the identification of overlapping cells is proposed in hope to improve the accuracy of cell counting. Moreover, the classification of overlapped cells was not conducted before. In this study, overlapped cells are grouped according to overlapping degree and number of cells overlapped. Accurate identification and classification of overlapping cells was expected to further increase the accuracy of WBC segmentation and counting by using an image processing approach.

There are 103 microscopic images used in this study are collected from a few online image databases, such as ASH Image Bank and Medical Stock Image. Another 164 real microscopic images are edited by using Adobe Photoshop CS6 to form different magnifications ranging from 100x to 500x and saved in in the JPEG format. Additionally, there are 100 artificial overlapping cells images are form by crop off the single WBC from real microscopic images to form additional overlapping cases with different number of cells. All images will be processed with MATLAB R2014a.

The general method for object counting contains four steps, namely image acquisition, image enhancement, image segmentation and object counting. The proposed method in this study has an additional step in between image segmentation and object counting, which is feature extraction (Figure 1). In the process of feature extraction, overlapping cells will be identified and classified into different group based on overlapping degree
