Abstract: Eleven compounds: goniomicin A (**1**), goniomicin B (**2**), goniomicin C (**3**), goniomicin D (**4**), tapisoidin (**5**), goniothalamine (**6**), 9-deoxygoniopypyrone (**7**), pterodondiol (**8**), liriodenine (**9**), benzamide (**10**) and cinnamic acid (**11**), were isolated from the stem bark of *Goniothalamus tapisoides*. All compounds were identified by spectroscopic analysis and, for known compounds, by comparison with published data. Goniothalamine (**6**) exhibited mild cytotoxic activity towards a colon cancer cell line (HT-29), with an IC₅₀ value of 64.17 ± 5.60 μM. Goniomicin B (**2**) give the highest antioxidant activity in the DPPH assay among all compounds tested, with an IC₅₀ of 0.207 μM.
